

INDURAGUARD 9200

COATING DATA

DESCRIPTION:

InduraGuard 9200 is a high solids, high-build, single-component, self-priming one-coat solution for weathered galavanized and previously painted structures. It is ideal for a single coat application on transmission towers, substation structures, quanset huts, chain-link fencing, and other aged galvanized structures. InduraGuard 9200 is a modified linseed oil, metallic and ceramic pigmented coating designed for maximum corrosion protection over minimal surface preparation. InduraGuard 9200 provides excellent wetting, is easy to apply by airless spray, roller, brush or paint mitt, and can be applied up to 12 mils DFT in a single coat.

USE:

To be used for painting weathered galvanized or previously painted surfaces of transmission or communications towers, poles, substation structures, chain link fencing, buildings and railroad bridges.

LIMITATIONS:

Not intended for immersion service, severe industrial exposures, new galvanized structures, severe acid or alkali environments, surfaces subject to splash or spillage of acids, alkalies or solvents.

Do not use for surface temperatures above 200° F.

SURFACE PREPARATION:

The surface to be coated must be dry, clean and free of contamination. Mininum surface preparation is SSPC-SP2 Hand Tool Cleaning. Can be applied to previously painted surfaces in sound condition.

COVERAGE:

1475 sq. ft/gal at 1 mil dft

DRY FILM THICKNESS: 8.0-12.0 mils.

WET FILM THICKNESS: 8.5-13.0

APPLICATION DATA

APPLICATION:

Mix thoroughly before use.

Mitt: Use a high quality paint mitt.

Airless Spray—Use .027-.029 tip; maintain 2500 psi operating air pressure at the tip without surge.

Brush: Use a high quality natural bristle brush.

Roller: Use a 3/8" nap roller with a solvent resistant core.

THINNING:

For airless spray application, thin up to 10% by volume with W-1012 as needed. Thinning is not recommended for brush, roller or mitt application. Use W-1012 for clean up.

DANGER: Rags, steel wool or waste soaked with this product may spontaneously catch fire if improperly discarded. Immediately after use, place rags, steel wool or waste in a sealed water-filled metal container.

CLIMATE:

Use this product only if the substrate, ambient air, and product temperatures are between 45°F and 90°F and surface temperature is at least 5° F above the dew point.

STORAGE TEMPERATURE: Minimum 45° F, Maximum 90° F

DRY TIME:

Air dry @ 77° F per ASTM D5895 TO TOUCH: 12-24 hours TO HANDLE: 48-72 hours. TO RECOAT: 30-60 days. **Note**: Lower temperature, higher film build, and/or poor ventilation will retard dry time.

PHYSICAL DATA:

VOLUME SOLIDS: 92% ± 1% SOLIDS BY WEIGHT: 97% ± 1% WEIGHT PER GALLON: 15.1 ± .2 lbs/per gallon VOLATILE ORGANIC CONTENTS: Unthinned - < 0.6 lbs/gallon; < 70 grams/liter Thinned 10% - < 1.1 lbs/gallon; < 135 grams/liter

SAFETY DATA:

This product is formulated free of lead, chromates, mercury or other toxic pigments. See product label for safety and health data information.
