

INTEGRITY - RESPECT - RELIABILITY - INNOVATION

DTM PERMASTIC SHOWS OFF ON RAIL TANK CARS

The rail repair and refurbishment business is a very large marketplace with many owners and repair shops located all over North America. Induron has the right products for this market. Our goal in the rail market is to give the customers what they need to protect not only their valuable assets (i.e. the rail cars), but also the valuable cargo inside the hopper cars, tank cars and freight cars.

The good folks at Alabama Railcar Services (ARS) in Ozark, Alabama worked with Induron to apply our Permaastic DTM Urethane to the exterior of two rail cars for WCHX Rail, which will add years of service to the cars' exteriors.

This [Permaastic Polyurethane](#) is a special-designed DTM urethane for storage tank exteriors in many markets, especially rail repair. It is a high-solids, high-build, direct-to-metal, aliphatic polyester polyurethane coating. This product protects steel, properly-prepared and primed concrete, and masonry in moderate-to-severe environments from corrosion and provides excellent long-term gloss and color retention. As a high-performance chemical and stain-resistant coating, it performs well in a variety of aggressive environments. The color options for this product are virtually unlimited, and it is available in both gloss and satin finishes.

PROJECT DETAILS:

- **Project:** Painting of Tank Car Exterior
- **Product Used:** Permaastic DTM Polyurethane (Black)
- **Application Date:** Sept. 15, 2017
- **Applicator:** Alabama Railcar Services in Ozark, Alabama
